

WIMS for STEM

Materials Management for STEM Education

WIMS for STEM is a mobile and web-based materials management solution that uses barcode scanning technology to track and report all aspects of STEM hands-on learning programs including materials, teacher training and procurement.

- Manage inventory across districts or schools
- Set specific needs and re-order based on that criteria
- Track schools, teachers, kits and certifications
- Easily re-order and receive/manage needed products

Inventory Management

Catalog all materials (permanent and consumable) with quantities and barcodes. Use a Reorder Report to determine which materials need to be ordered based on upcoming needs. Ensure you have the materials you need and reduce wasteful over-ordering.

Training Management

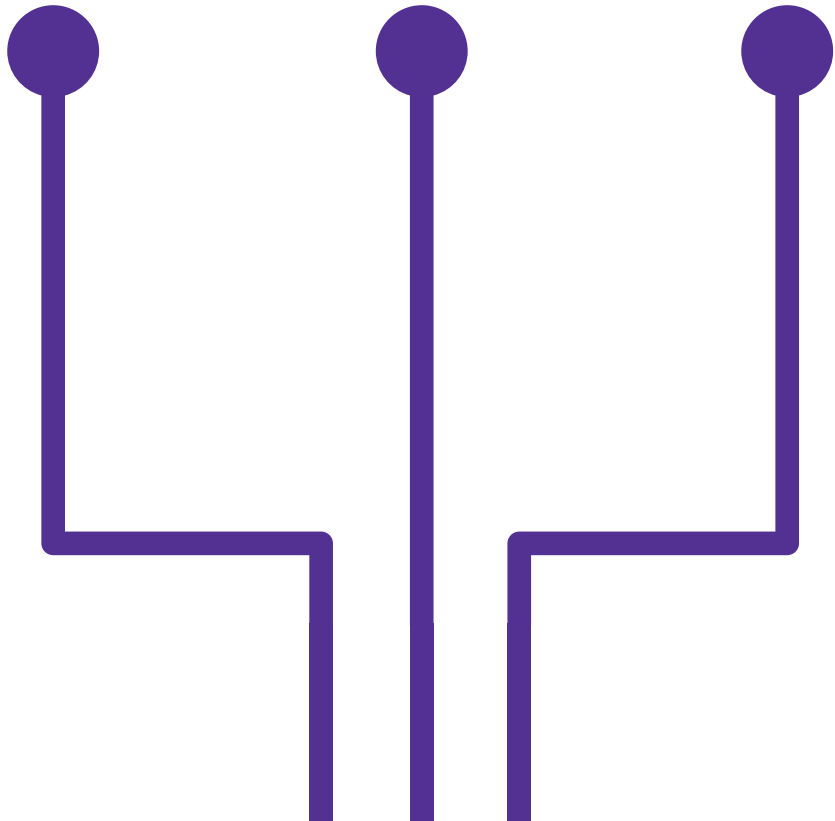

Track schools, teachers and kit certifications with an easy-to-use online tracking tool. Use the optional add-on to track training events effectively by setting up an online registration page and tracking registrations in real time.

Kit Refurbishment

Streamline the refurbishment process and maintain real-time inventory counts by scanning only those items that are missing. Automatically send emails to teachers about missing items.

Kit Transfers

Quick and accurate methods to assigns kits to teachers while maintaining accountability and visibility. Automates the creation of teacher and kit barcode tags.
